About

I am a person who is always looking for innovation and automating everything possible, enabling us to focus on more important tasks. I have experience with projects in the areas of education, streaming and finance. I am always open to discuss about architecture and performance, we always can learn more with a good discussion.

Professional Experience

Rakuten, Remote

iOS Developer

October 2022 - current

- Responsible to design and create a custom new SDK for the analytics.
- Implemented an authentication functionality that is modified depending on the user's country.

iOS Swift Modules Github Actions SDK

Itaú, Remote

iOS Developer

March 2022 - October 2022

- Responsible for maintaining the entire notification flow, composed of push notifications, deeplinks and a feature that allows the user to keep track of its notifications.
- Mentoring a Junior developer on my squad, teaching him about iOS development.
- Implemented several individual modules and distributed using Cocoapods.

iOS Swift Modules Cocoapods Jenkins

Meta, Remote

iOS Developer

December 2020 - February 2022 (part time)

- Responsible for defining the base structure project for the Maple Leaf Sports & Entertainment (MLSE) client, defining the required APIs, the web socket messages and features prioritization.
- Implemented a SDK following Clean and MVVM to provide features as live and VOD streams, chats, real time stats and other features.
- Implemented a design system and a custom theme to be setted by the host app.
- Implemented scripts and configured the CI (using Github Action) to automate the build and distribution of the compiled SDK and its documentation.

- Used Agile and Scrum methodologies, also having weekly meetings with the client and the client backend team.

iOS Swift WebSocket SDK CI/CD Github Actions Scrum Cocoapods

Claro Brasil, São Paulo - SP, Brazil

iOS Developer

March 2019 - March 2022

- Developed one stream project from the beginning, but unreleased, and improved another stream project, called NOW. Both of them provided live and VOD contents.
- Helped to define the solution and the architecture for the unreleased project, always looking for performance.
- Implemented a feature to list all channels and their programs, to improve the performance and the time to render the screen to the user, I implemented a custom cache algorithm to avoid unnecessary recalculations and binary search to improve the time to find the current program based on the time.
- Improved the architecture to use MVVM and follow Clean Architecture on the NOW project. This one had about 300,000+ monthly active users.
- Increased the test coverage applying the dependency injection concept.

iOS Swift Swift Package Manager CI/CD Fastlane Bitrise SAFe

University of Fortaleza - UNIFOR, Fortaleza - CE, Brazil

iOS Developer

March 2018 - March 2019

- Worked as an iOS Tech Lead.
- Responsible for all the university iOS Apps. The main university app had about 24,000+ monthly active users.
- Taught iOS courses for interns
- Responsible for teaching about the iOS, git, scrum methodology and also how to design the entire app, from the UX, priorities, APIs, front end to tests.

iOS Swift Tech Lead Ruby on Rails

University of Fortaleza - UNIFOR, Fortaleza - CE, Brazil

Intern - iOS Developer

July 2017 - March 2018

- I learned more about iOS working on the main university app, especially working on the chat and the map feature that could guide the users through the university.
- Refactored the app following MVVM.
- After 9 months I was hired to be responsible for a team composed of 10 interns. My job was to teach them about iOS and software engineering.

iOS Swift

Education

University of Fortaleza - UNIFOR

Graduation, Computing Engineering

2015 - 2019

- Final Project: Research using recurrent neural networks to predict cryptocurrency trends.
- Object Orientation class assistant in 2016.
- Microprocessor class assistant in 2017.
- Researcher in the area of sensor network security, trying to implement an algorithm to detect attacks.

Personal Projects

iOS Movies: App integrated with TheMovieDB to be a base project to apply new technologies or create a POC.

[iOS](#) [Swift](#) [Design System](#) [MVVM](#) [View Code](#)

iOS Cash Handler: This project in development creates an app that uses SwiftUI, Clean Architecture, Coordinator and SPM modules.

[iOS](#) [Swift](#) [Design System](#) [MVVM](#) [View Code](#)

iOS Common Module: A set of extensions for views to improve code readability, write and maintenance constraints and allowing easy integration with design systems.

[iOS](#) [Swift](#) [Design System](#) [View Code](#)

Home Security System: System to detect people and objects using IP cameras.
